***Inventory:*** We have an extensive inventory and we work very hard at ensuring that product is available for our customers as orders are placed. However, we will have times when certain products may not be readily available. The buyer will be notified of out-of-stock situations, along with an availability estimate for the product at the time of order in most instances. In addition, our customer service reps will advise the buyer of alternative products when out-of-stock situations occur.

***Shipping policy:*** All product is shipped as FOB Origin. Unless otherwise requested by buyer, product will be shipped via carriers of our choice with shipping/handling, insurance, or additional packaging charges prepaid and added to the invoice. Primescape typically ships stock orders within 24 hours of receipt of order. A second invoice may be issued if charges related to residential or lift-gate service are required at time of delivery. If a specific shipping date is an important consideration, please call customer service to confirm product availability and shipping information.

### ***Shipping Damage or Shortages:***

Our products are thoroughly inspected prior to shipping and we go to great lengths to ensure that our products are sufficiently packaged. Unfortunately, damages during shipping do occasionally occur. We encourage you to inspect all packages before signing to accept the shipment. Please take the following steps to ensure the carrier's liability in the event of a damaged shipment:

- Count all cartons, noting any discrepancies.
- Inspect carton exterior, noting any visible damage.
- Open cartons (in the presence of the driver) if you suspect that damage has occurred.
- If damage is found, note the nature and extent of damage on the bill of lading or freight bill when signing to accept shipment or simply refuse to accept the damaged box noting that the box is being refused due to damage.

Occasionally damages are not discovered until after the driver has already left. In the event that a "concealed damage" is discovered, please contact Primescape Products at 847-634-4125 immediately so that we may replace the damaged merchandise to you and file a claim with the carrier.

**Primescape Products must be notified within 5 days of receipt of damaged merchandise, or shortages. Failure to notify Primescape of any damages or shortages within 5 days of receipt may affect our ability to replace this merchandise.**

***Return Policy:*** No merchandise may be returned without our advance written consent. *All authorized returns are subject to a restocking charge of \$25 or 20% net invoice, whichever is greater. In addition, all related transportation costs are to be borne by the purchaser.* Authorized returns must be received in saleable condition, without exception. Credit will be withheld if merchandise is not saleable. Returns cannot be authorized after 30 days from date of the original shipment. Unauthorized returns will be refused. Only stock items are returnable.

# Prime Mix 532 Soil

**We've created a soil mix that has increased dimensional stability and subirrigation performance.**

**Prime Mix Blend 532**

	Mixture
Components	Coconut Coir, Rice Hulls, Haydite
Application	Sub-Irrigation, General Planting, Specimen plantings and Interior/ Exterior plantings

Bag Size (Cu. Ft.)	2	60
Cost (per bag)	\$9.72	\$270.27
Item Code	P-Mix2	P-Mix60
Bags per Pallet	45	1
Bulk Density	22lbs per cu. ft. @ 49% moisture*	

## Components

Minimum Order: 1 pallet

\*SOIL MAY FREEZE DURING WINTER DELIVERIES - ALLOW TIME FOR THAWING

### Coir (Ground coconut husks)

- Benefits:
- Unique water holding capacity
  - Good drainage/aeration
  - Less compaction than peat moss
  - Retains physical properties
  - Easier watability than peat
  - Ability to retain nutrients against leaching and buffers ongoing release
  - Natural and renewable resource
  - Uniform in composition

Coir readily absorbs water, re-wets far more easily than sedge peat - even when completely dry, thus reducing costs of wetting agents. Coir reduces watering frequency without plant stress, thus reducing labor cost and minimizing loss achieving better water conservation. Professional grower experience indicates that Coir is less favorable to fungus gnat populations. Coir supports your cultural efforts & helps minimize replacements.

### Rice Hulls

Composted rice hulls have been used successfully in container media for at least 15 years. Rice hulls resist decomposition & compaction because of the naturally high silicon content in the hulls.

### Haydite

- Benefits:
- Reduce compaction of soil
  - Increase soil porosity
  - Increase air space for healthier root development
  - Reduce labor cost through more efficient watering
  - Increases mix stability
  - Derived from natural shale deposits

Haydite's porous micro-surface texture and interior porous structure resist clogging and provides superior aeration that promotes growth of delicate, fine roots system. Problems of soil compaction are significantly reduced. The soil remains resilient because moisture and air movement are not restricted. Haydite absorbs water and nutrients allowing for less run off. Water and nutrients are held by each particle and are slowly released back into the soil and root zone, as needed, promoting healthier root growth.

## EcoEXEMPT IC<sup>2</sup>

Made from essential oils, this natural pesticide is effective against a wide variety of indoor and outdoor pests. The best part is that NO REGISTRATION with the EPA is required for this product. Its active ingredients include rosemary and peppermint oils which actually target and block a key neurotransmitter receptor site for octopamine, which is found only in invertebrates (insects). Once blocked, the bugs' nervous systems shut down and lead to a quick death. Mammals don't have receptors for octopamine, so EcoEXEMPT's plant oils have no adverse effect on them. Ask your Primescape representative about using this product with **Companion**, **Superthrive** and **PSI Matric** as a "green drench" to control fungus gnats.

**NOTE: This product does have a strong odor at the onset. Before using, it is best to advise nearby people that the smell is a by-product of the mixture of natural oils, NOT harmful chemicals!**

*EcoEXEMPT IC<sup>2</sup>'s active ingredients are included on the EPA's minimum-risk pesticides list exempted under FIFRA Section 25(b).*

Researchers have adapted the electrostatic spraying technology to significantly enhance the way chemical applications are performed in interior settings. The technology will allow interiorscapers to spray much more efficiently and to improve the results of the spray applications. The Electrostatic Spraying Systems Co. has introduced this technology in their Model XT sprayers.

### How Does It Work?

The sprayer puts a negative (static) charge on the fine stream of particle spray, which causes the spray to be attracted to the naturally positively-charged plants. As a result, these fine spray particles will cover all plant surfaces, including the backsides of stems and the underside of leaves.

This proven method of air delivery is the most effective system developed for moving spray droplets deep into inner regions of plants. Because of this static attraction and fine misting, you will use less chemicals than with conventional sprayers, and will have very little overspray. Consequently, the set-up time for covering surrounding areas with plastic is virtually eliminated, and clean-up is much quicker.

### XT Benefits

- Reduction in chemical used by 30-60%.
- Spraying time cut in half.
- Reduced spray time allows for spraying more accounts in order to keep infestations manageable.
- Eliminates need to lay plastic prior to spraying for less disruption to your client.
- Better kill rate on chemical applications for healthier plants.

### XT Features

- Single port electrostatic spray gun.
- Compatible with all conventional chemicals and fungicides.
- Portable, self-contained.
- 110 volt, 10 amp compressor.
- Main tank holds enough mix for one hour of spraying.
- One liter auxiliary tank for easy spot spraying.
- 18" wheelbase perfect for narrow pathways.
